

Petition to the Public Service Commission of Wisconsin, American Transmission Company and ITC Transmission Holdings Corporation regarding “Cardinal Hickory Creek” 05-CE-164 that includes a high voltage transmission option (the “Project”) between Dane County, Wisconsin and Dubuque County, Iowa. In signing this petition I hereby request the Public Service Commission of Wisconsin in cooperation with applicants to ensure that the application includes a clear, consumer-friendly, comprehensive, cost-benefit analysis of non-transmission alternatives including equally valued investments in accelerated energy efficiency, load management and distributed generation both as stand alone resources and in combination with each other and also providing load reducing support of lower voltage transmission facilities that would be avoided by the Project. The funding amounts for the alternative investments should match that Wisconsin ratepayers would assume over 40 years including financing, operation, maintenance and all other costs. I request that the above information along with year by year estimates of total carbon emissions for the MISO north region and Wisconsin over a 10 year study window be made available in complete, accountable form for public evaluation before the application is deemed complete or else the Commission is hereby instructed to not issue notice of proceeding for this docket. *[Petition collector: In signing, dating & sending this petition to SOUL of WI, PO Box 146 La Farge, WI 54639 you are acknowledging that you have witnessed the below signatures.]*
